

Antibody Expression - NIH Nonhuman Primate Reagent Resource

We offer assistance to investigators to express monoclonal or recombinant antibodies from your cell lines, and purify antibodies to meet requirements for animal use. This service is provided on a cost- recovery basis.

We offer:

- Hybridoma subcloning
- Medium optimization
- Expression characterization
- Mycoplasma testing
- Purification process development

After initial characterization and optimization, most production and purification projects can then be outsourced to a private contract lab. We can assist in identifying the best contract lab to meet your need.

[Contact the Reagent Resource](#) for more information.
